SUMMARY

Full-stack software engineer with 8+ years of experience building and scaling SaaS and consumer web applications, including 6+ years working remotely and asynchronously across time zones since March 2020.

My core stack is TypeScript and Java: React, Next.js and Angular on the frontend, Spring Boot, Node.js and Express on the backend, with AWS, Docker and CI/CD in production. I work across the whole stack, from API and backend architecture to user-facing interfaces, with a focus on reliability, usability and maintainability. I use AI coding agents as a regular part of how I work.

WORK EXPERIENCE

TPTS *Freelance software engineer* Andorra-based, remote 2025 – Present

Taylor Pancaldi Technology Services, a company providing custom software solutions for small businesses and freelancers.

- Designed and built **FlexInvoice**, an invoicing tool that generates styled PDF invoices from structured data via server-side rendering and headless Chrome, replacing manual document workflows with automated, repeatable invoice generation.
 - Built as two decoupled services: a stateless **Next.js rendering API** (Zod validation, server-side React, Tailwind CSS, A4 PDF output) and a **React + Express client** with a form-based GUI, YAML-driven data presets, schema validation, CSV export and Docker containerization.

Appetize.io *Full-stack software engineer* US-based, remote from Italy / Andorra 2024 – 2026

SaaS startup providing browser-based iOS and Android app simulators, enabling app streaming, automated testing and embeddable live previews.

- Built a **self-serve enterprise SSO** onboarding flow (SAML & OIDC) that replaced manual per-tenant database configuration and URL provisioning, letting customers configure Okta, Azure AD and other identity providers themselves.
 - Removed engineering from the enterprise onboarding critical path, saving 30+ hours of setup effort and reducing ongoing support load.
- Contributed to the **V2 core web application** using **Next.js**, integrating new and existing API endpoints and expanding E2E test coverage from 50% to 90%+.
- Led the technical implementation of a **new appetize.io marketing website** using **AstroJS**, improving performance from ~60% to 90%+ and accessibility, best practices and SEO from ~75% to 95-100%.
- Did extensive work on the **Stripe billing integration**, keeping the pricing model in sync between the marketing site and the core webapp's subscription and payment handling.
- Introduced a structured **AI-assisted development workflow** at Appetize (LLMs for codebase discovery, refactoring proposals and test scaffolding) with guardrails: local context, no proprietary data exposure, strict review and test validation.

Resourcify *Software engineer* Germany-based, remote from Italy 2022 – 2024

B2B SaaS platform offering end-to-end waste management and circularity solutions, helping companies manage disposal, recycling and compliance.

- Built a production **accounting platform** with Java (Spring Boot) and Angular, used daily by the operations team, replacing manual spreadsheet workflows and supporting reconciliation across 1000s of records per day.
- Diagnosed and addressed **scaling bottlenecks in backend services** and asynchronous data pipelines as the platform grew, optimizing data access patterns, queries and job processing to keep API responsiveness and stability as data volume rose.
- Acted as one of the **senior developers** on the team, collaborating daily with other developers through **code reviews** and general support and mentoring, regularly onboarding new joiners.

BJSS *Software engineer* UK-based, remote 2020 – 2022

Technology consultancy delivering custom software solutions; worked on Specsavers' e-commerce platforms for glasses and contact lenses.

- Architected a **GDPR-compliant cookie consent system** across 9 production domains, deployed behind a runtime feature flag to allow staged rollout independent of monthly releases, preserving analytics and login flows on a high-traffic platform.

- Maintained and enhanced a large-scale **e-commerce web application**, delivering changes across the full user journey from product discovery to checkout and payment.

Booking.com / Rentalcars.com *Graduate software engineer* UK-based, onsite 2018 – 2020
Online platform aggregating car rental providers, enabling search, comparison and booking across multiple suppliers.

- Contributed to backend services, including **migrating legacy systems to Spring-based APIs** as part of a broader transition toward **microservices**, and improving integrations with external supplier APIs supporting automated reservations.
- Participated in **web replatforming** efforts, building **React-based UI components** and search filters integrated into the main application.
- Worked on user-facing features within Rentalcars.com, maintaining critical flows such as **payments** and **sanctions screening**.

Free University of Bolzano *Research assistant* Italy-based, remote 2017 – 2018
Academic research collaboration across multiple Italian universities.

- Co-authored a **peer-reviewed IEEE research article** on cloud service contracts and policies, analyzing the implications of **GDPR** and providing guidance for organizational compliance with European data protection regulations.

RELEVANT PROJECTS

Linkarium • 2026 *Personal project*
Full-stack tool (**Next.js**, **TypeScript**, **Tailwind CSS**) that turns pasted URLs into a shareable list page with metadata filled in automatically, backed by **Supabase/PostgreSQL**. Built from scratch with **Vitest** unit tests and a **Playwright** E2E suite.

WalineJS • 2025 – 2026 *Open-source contribution*
Waline is a lightweight, privacy-focused open-source comment system for websites and blogs.

- Contributed feature development across both client and server packages, including third-party messaging integrations (Telegram, Discord, email notifications) and moderation features such as admin approval for first comments.

Advent of Code • 2015 – 2024 *Personal coding challenge*
Completed all yearly challenges, primarily using **TypeScript**, Kotlin, Java and Python, focusing on algorithmic problem-solving, code quality and language proficiency.

EDUCATION

<u>The University of Manchester (UK)</u> <i>MSc in Advanced Computer Science • Software Engineering & Data Science path</i>	Grade: distinction	2018
<u>Free University of Bolzano (Italy)</u> <i>BSc in Computer Science</i>	Grade: 106 / 110	2017
<u>College of Charleston (USA)</u> <i>BSc in Computer Science - Exchange semester</i>	Grade: 4.0 GPA	2015

SKILLS

Frontend & UX: React, Angular, Next.js, AstroJS, JavaScript / TypeScript, Tailwind CSS
Backend & APIs: Java (Spring Boot), Node.js, Express, Python, REST APIs, Stripe, C#, MySQL
Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD (Bamboo, Jenkins, GitHub Actions)
Languages: Italian (native), English (C2), German (B2), French (A2), Spanish (A2), Catalan (A1)
